CHAT GPT

ChatGPT is a computer program that can talk to people and answer questions. It was created by a company called OpenAI. The "GPT" in ChatGPT stands for "Generative Pre-trained Transformer." This means that ChatGPT has been trained on a large amount of text from books, websites, and conversations so that it can understand and produce language in a natural way.

ChatGPT works by predicting the next word in a sentence based on the words that come before it. For example, if you type "What is the capital of France?" ChatGPT will answer "Paris" because it has learned this information from the texts it has read.

People use ChatGPT for many things. Students use it to help with their homework or to practice English. Writers use it to get new ideas, and some people even use it to have a friendly conversation when they feel bored. However, ChatGPT is not perfect. Sometimes it gives wrong answers or makes mistakes because it doesn't really understand the world — it only knows patterns in language.

It's important to use ChatGPT carefully. If you're not sure about the information it gives you, it's a good idea to check with a teacher, a book, or a reliable website. Also, ChatGPT cannot feel emotions or understand feelings like a human does. It's just a smart tool that works with language.

Reading Comprehension (7 points)

1. Choose the correct answer (2 points)

a) What does "GPT" stand for in ChatGPT?

- a. General Pre-trained Tool
- b. Generative Pre-trained Transformer
- c. General Programmed Technology
- d. Generated Predictive Text

b) Why might ChatGPT give wrong answers sometimes?

- a. Because it is not connected to the internet
- b. Because it does not understand language patterns
- c. Because it doesn't really understand the world
- d. Because it runs out of data

c) What is one thing that ChatGPT cannot do?

- a. Help with homework
- b. Understand emotions
- c. Answer questions
- d. Write ideas for stories

d) What should you do if you are not sure about an answer from ChatGPT?

- a. Trust it completely
- b. Ask ChatGPT again
- c. Check with a teacher or reliable source
- d. Ignore it

2. Answer the following questions using information from the text and your own words. Do not copy from the text (2 points)

a) How does ChatGPT learn to answer questions?

.....

.....

b) What are two ways people use ChatGPT?

.....

.....

3. - Vocabulary. Find words in the text meaning the following: (1 point)

talk	
smart	
mistake	
sure	
reliable	

4. – Read the following text about a tradition. Decide which of the four words best fits each space. (2 points)

Artificial Intelligence (AI) is becoming more important in our daily lives. AI helps computers to think and make decisions like humans. For example, when you search for something online, AI helps to _____ (1) the most relevant results. It also powers virtual assistants like Siri and Alexa, which can understand and answer questions.

AI works by learning from large amounts of data and trying to _____ (2) patterns. This allows AI to predict what you might like or need. For example, music apps use AI to suggest songs based on what you have listened to before.

However, AI is not perfect. Sometimes it can _____ (3) mistakes or misunderstand questions. That's why it's important to check information from other sources.

In the future, AI is expected to continue to _____ (4) and become even more helpful in areas like healthcare and transportation.

(1) look for	find	give	come up with
(2) identify	search for	make	come across
(3) give up	make	take	point out
(4) build	move on	develop	come up

5.- Writing: (3 points)

Write an answer to one of the questions below (80-100 words).

1. Imagine that your school is planning to use more Artificial Intelligence (AI) in the classroom. AI could help teachers by checking homework, suggesting study plans, or even answering students' questions.
- How do you think AI could make learning easier or more interesting?
 - Do you think AI could replace teachers in the future? Why or why not?
 - What are some possible problems that AI might create in schools?
- Write an essay explaining your opinion and give examples to support your ideas.

2. Think about the different ways Artificial Intelligence (AI) is used in everyday life, such as virtual assistants (like Siri or Alexa), online shopping suggestions, and self-driving cars.
 - How often do you use AI in your daily life?
 - What is one example of AI that you find helpful or interesting? Why?
 - Are there any risks or problems with using AI too much in daily life?Write a text describing how AI affects your life and what you think about its advantages and disadvantages.

Remember: the picture and questions above are just to help you generate ideas. Think and put your ideas in order before starting to write.
